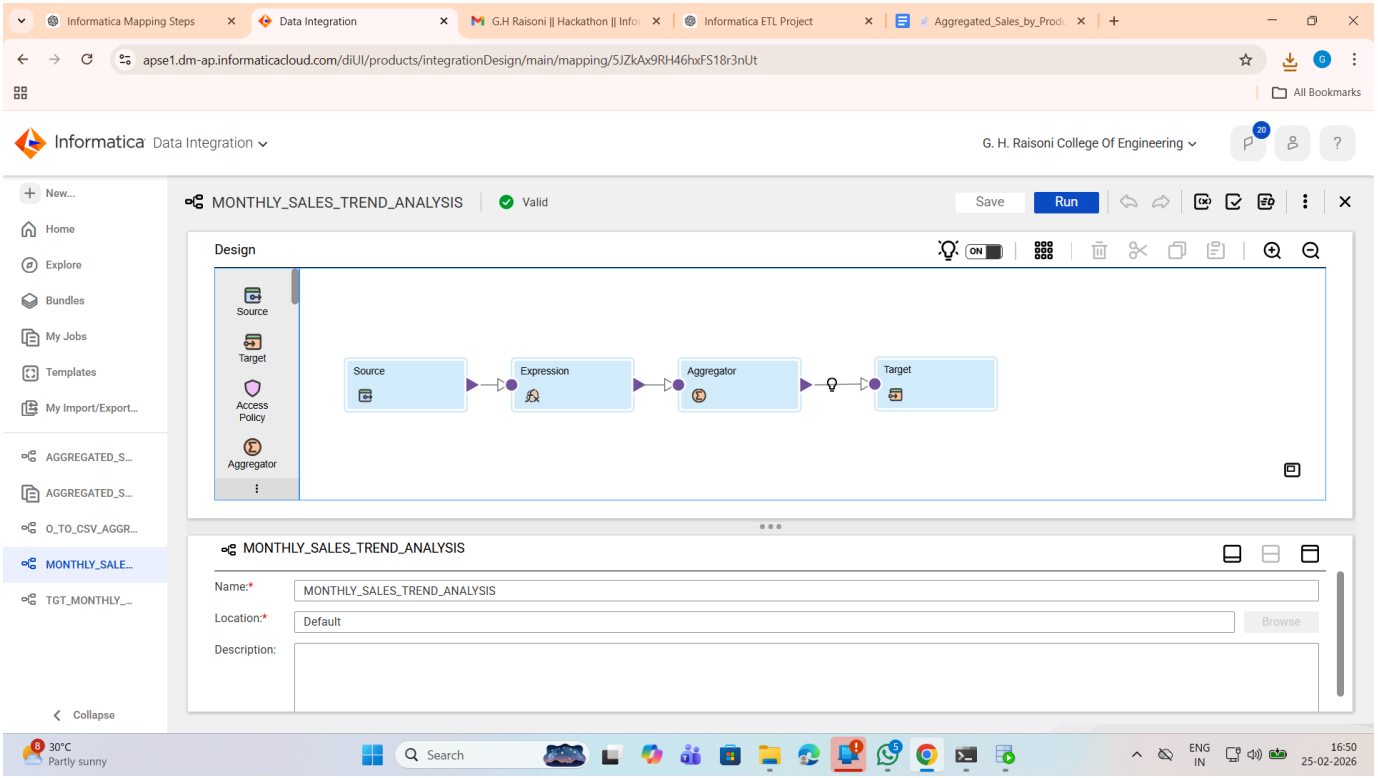
📄 Task-5 Documentation

Monthly Sales Trend Analysis

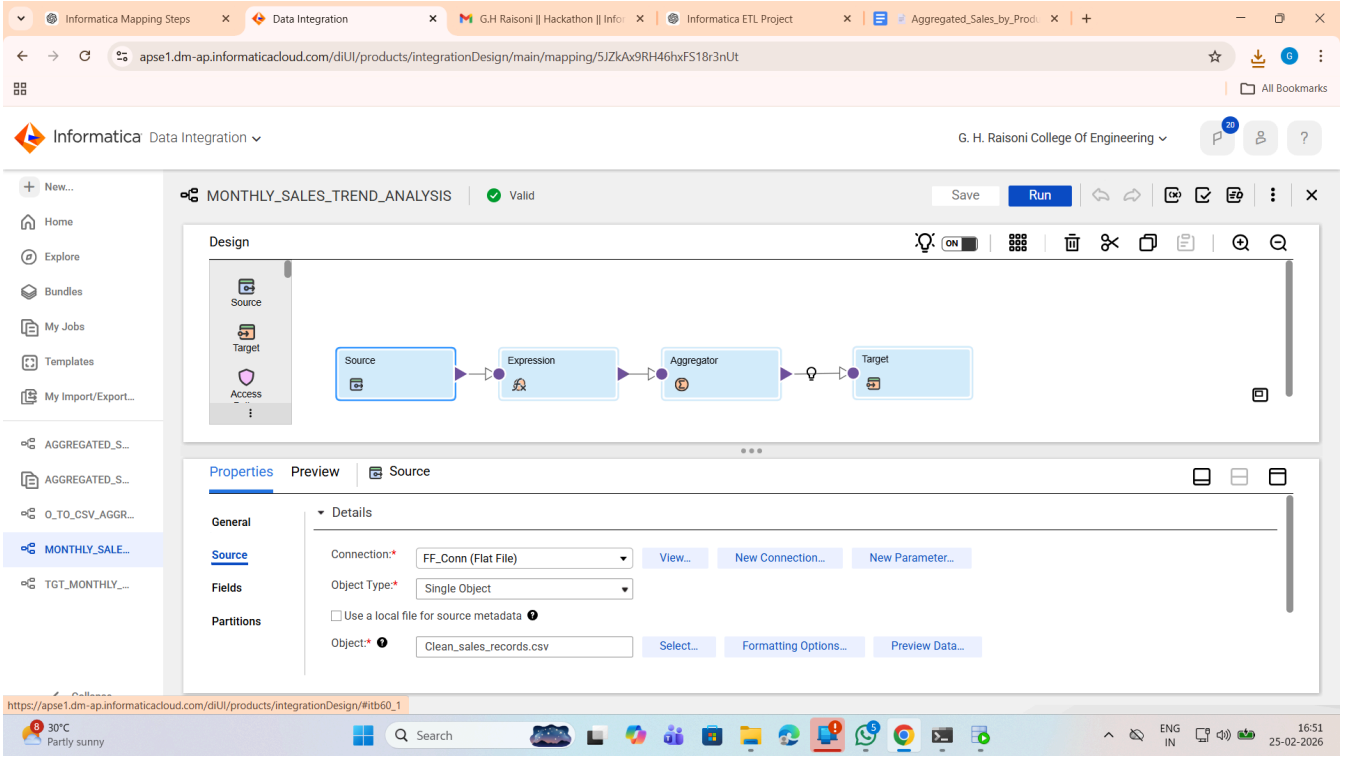
1️⃣ Objective

To analyze sales data month-wise and calculate total transactions and total revenue for each month.



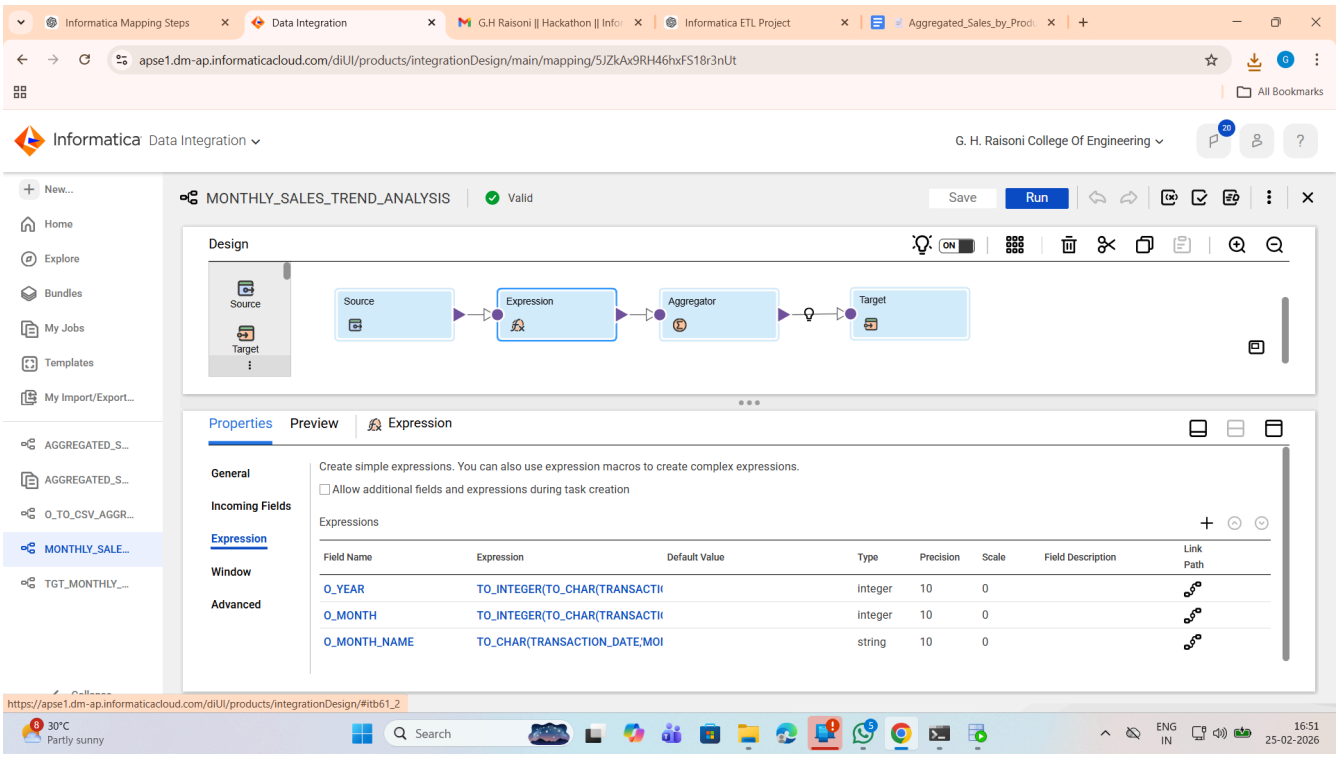
2️⃣ Source

Cleaned sales transaction data is used as input for monthly analysis.



3 Expression Transformation

Used to extract Year, Month, Month Name and calculate revenue from transaction date and sales fields.



4 Year Extraction

Year is derived from transaction date for grouping yearly trends.

---

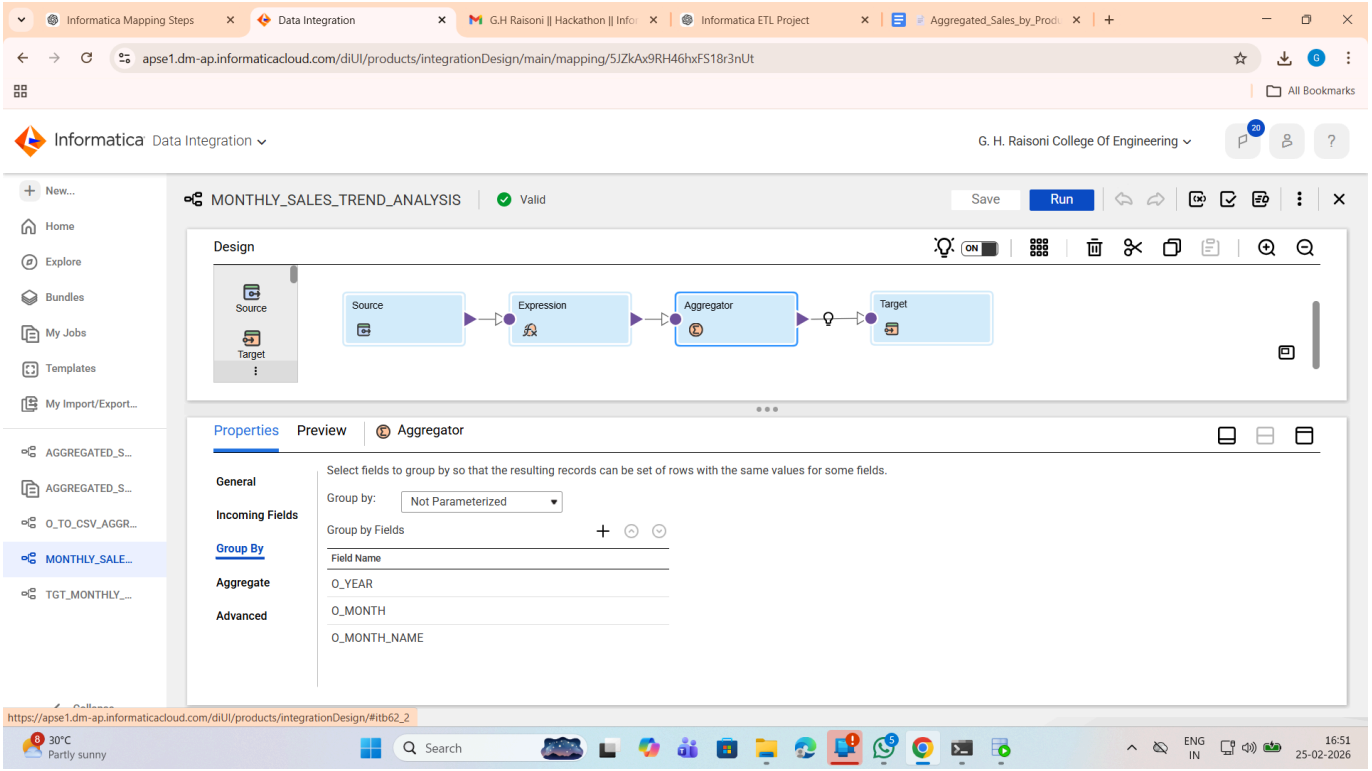
5 Month Extraction

Month number is extracted to analyze month-wise performance.

---

6 Month Name

Month name (JAN, FEB, etc.) is generated for readable reporting.



7 Revenue Calculation

Revenue is calculated as:
Quantity × Unit Price × (1 − Discount%).

---

8 Aggregator

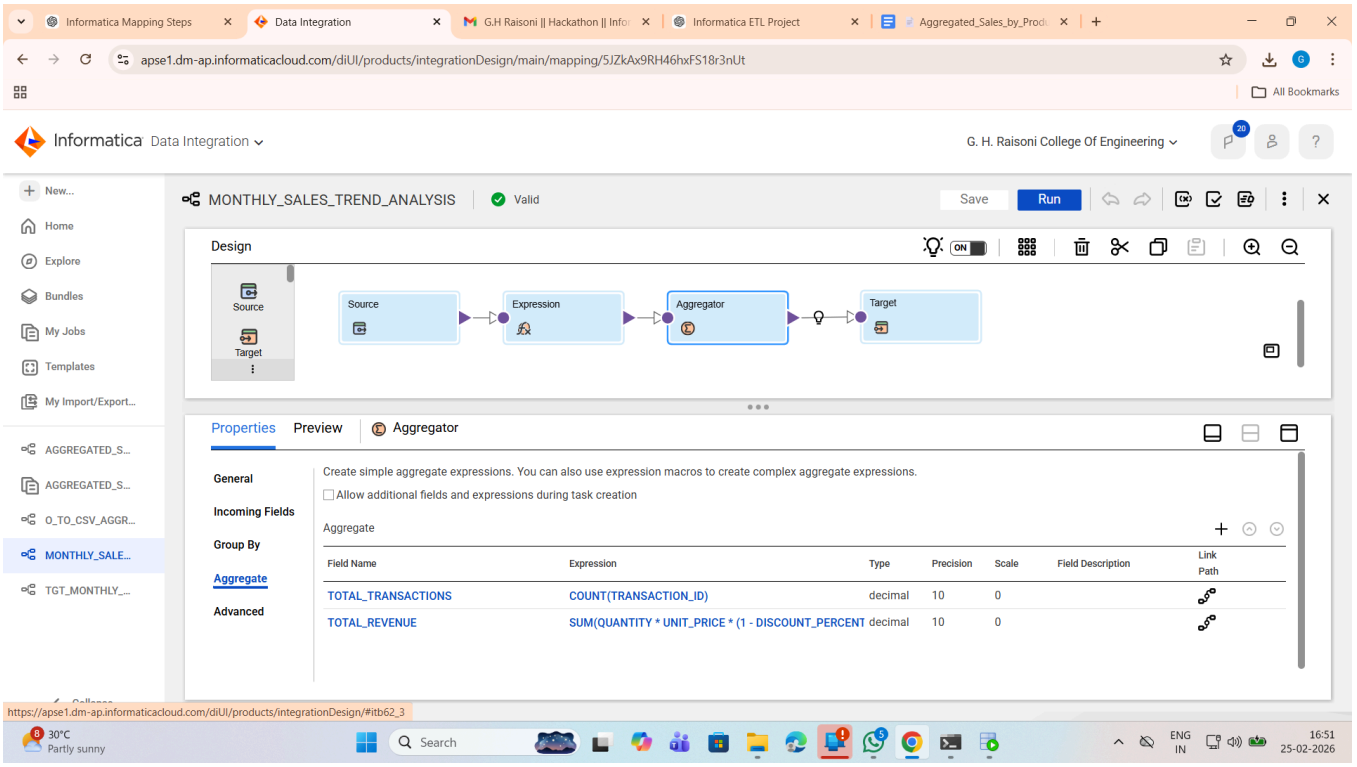
Groups data by Year and Month to generate summarized monthly results.

9️⃣ Total Transactions

Calculated using COUNT of transaction IDs per month.

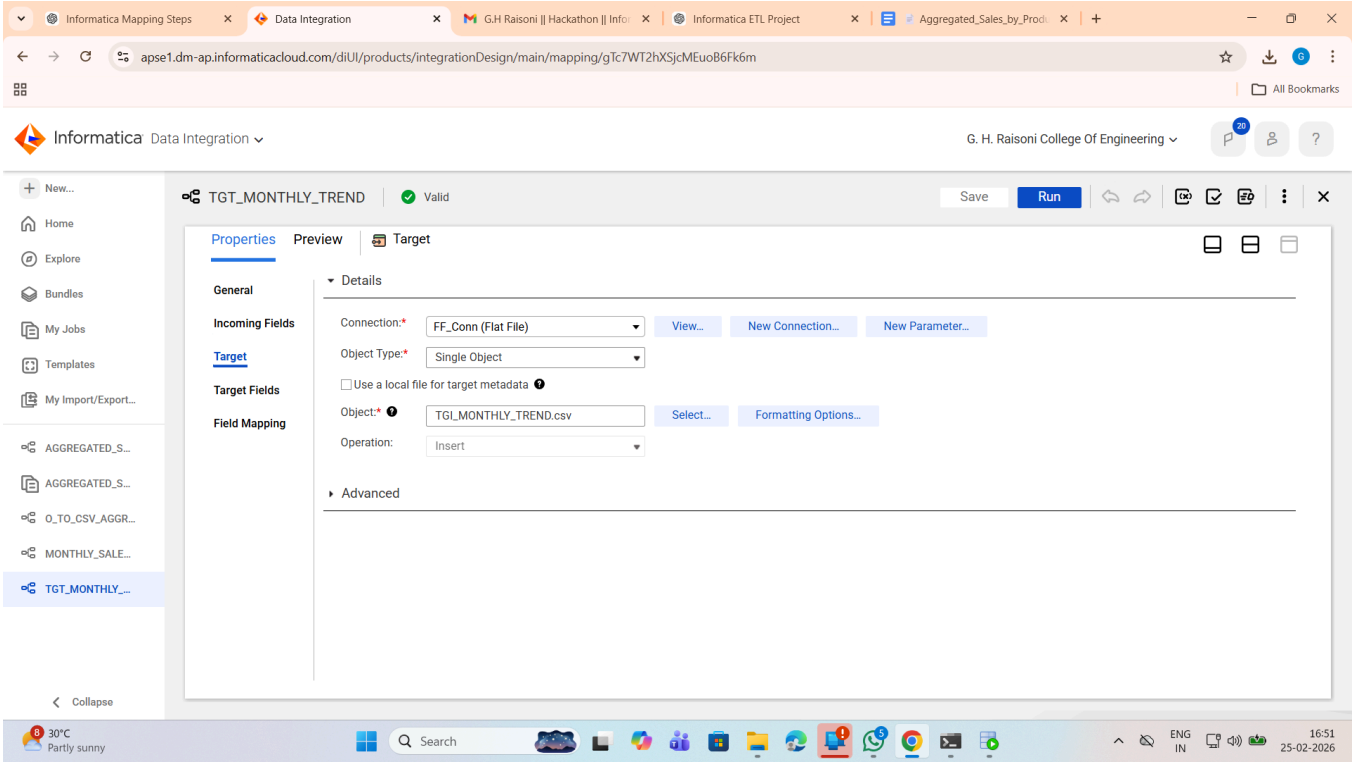
🔟 Total Revenue

Calculated using SUM of calculated revenue per month.



1️⃣1️⃣ Target

Monthly summarized output is stored in TGT_MONTHLY_TREND file/table.



1⃣2⃣ Business Purpose

Helps track monthly sales growth, seasonal trends, and revenue performance.
